

# MNT 240 SP

## Emergency Kit for Mains LED Lamps

- // Suitable for most mains GU10 LED lamps
- // Fits through 60mm ceiling cut outs
- // Maintained or non-maintained operation
- // 100% output in emergency
- // Plug & play battery connectors
- // 10 Cell battery pack
- // Pre-wired flying loom for fast installation
- // Works with dimmable lamps

## Construction

Our MNT240SP emergency kit is designed to provide 100% emergency back up when using mains GU10 LED lamps. This is achieved by providing the pack with a 240v AC supply which is converted to DC voltage in emergency mode to power the lamp.

The inverter is housed in a metal enclosure and batteries are housed within a flexible sleeve which has been designed to be installed through a 60mm cut out as standard. To ensure simple installation the pack is pre-wired with a mains connection lead, lamp connection lead and plug and play battery connectors.

The pack will work with dimmable lamps and other mains LED lamps subject to compatibility of the electronics.

## Typical Applications

Mains GU10 LED lamps.
