

DECOLUME STRIP LIGHT

Decolume Strip Light is a low voltage product that is safe to install in the smallest of spaces. It creates a professionally designed look. It is attractive, flexible and simple to install. It's innovative lamp sockets allow for the use of festoon lamps, xenon lamps, halogen dichroic lamps and LED festoon lamps. The interchangeable lamps can be used easily to create unlimited decorative illumination effects. It's flexible nature allows it to fit curved profiles as well as straight runs. It can be cut to any length and has independent lamp operation, meaning that if a lamp burns out no other lamp is affected.

Actual Size

IMPORTANT: Decolume is designed for a maximum capacity of 25 amps. This is equivalent to 300 watts of lighting when a 12V system is used or 600 watts of lighting when a 24V system is used. When using a 12V electronic transformer you must not exceed 2 metres in length. You must not exceed 3 metres in length when using a 12V coiled transformer and you must not exceed 4 metres in length when using a 24V coiled transformer. The transformer must be wired no more than 200mm away from the decolume strip. LED festoon lamps are available. The LED Decolume can be run at an amazing 11 metres from one 50W transformer with the 63mm spacing strip. The WP52 can run 170 LED lamps and the AL20 can run 66 LED lamps. When using LED festoon lamps you must use a LP Converter.

Special Features

- Flexible material creates versatile elegant lighting effects
- Available in both 12V and 24V
- Easy to install and labour saving
- Can be dimmed (not LED)
- Able to use festoon lamps, xenon lamps, halogen dichroic lamps and LED festoon lamps
- No effect on other lamps when one lamp is burnt out or faulty

Applications

- Covin, shelves, cabinets, pelmet, mirrors, alcoves etc.
- Can be used on boats that have a 12V or 24V supply
- Xenon lamps have 6000hrs life, LED lamps have 50000hrs life
