

FUSION DIMMER MASTER WIRED & WIRELESS SWITCH

FUSION DIMMER SLAVE WIRELESS ONLY SWITCH

BENEFITS / FUNCTIONS

- Replaces standard switch
- No neutral cable required
- Add up to 16 Wireless Switches
- Dim at every switch
- Group control - Master ON and/or Master OFF
- Scene Setting

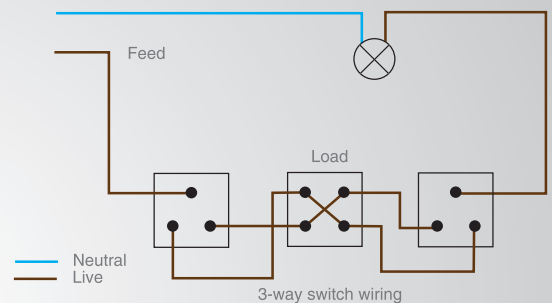

Our Wise Intense Dimmer Receiver is a retro dimmer based around two technologies: electronic dimming and wireless communication. These dimming units have 3 simple buttons to control your lighting: on/off, raise and lower.

What makes Intense Fusion distinct is the wireless communication between a receiver unit and transmitter unit. The receiver dimmer is designed to replace your existing light switch using the existing cables. It can then be synced to a number of transmitter dimmers that are completely wireless and can simply be placed around your house. No more chasing wires through wall cavities. You now have the freedom to put your lighting dimmer wherever you want and if you don't like the position, you can easily move it.

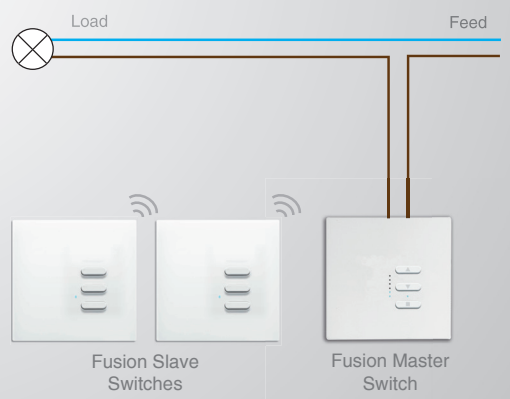

On top of this, the Wise Intense Fusion range offers you a number of options for both simple and more complex lighting control. For simple 2 way dimming a 3 button slave transmitter dimmer is used. For more elaborate scene control a 7 button transmitter dimmer can be employed. A single button can be programmed as a master ON or OFF

Replaces your standard wired switches to enable simple wireless 2 way dimming wherever you desire.
